Zae Myung Kim

CS PhD candidate at University of Minnesota Twin Cities

My research interests center on developing a "meta-scaffolding paradigm" that integrates discourse structures, dataset metadata, and metacognitive feedback into the training loop of large language models to stabilize learning and produce interpretable, coherent long-form text. I design disciplined training schemes that slash data and compute demands, curtail manual prompt engineering, and steer model reasoning toward human-like cognitive patterns.

I have collaborated with researchers at Amazon, Salesforce, Grammarly, and Naver.
